CLO # 2, PLO3, C6: Construct SQL statements given a relational data model to manage an electronic database.

Q2: [20marks]

Please consider the relational data model below and **construct** appropriate SQL commands to answer the questions that follow

FALL 2025

a) **Compose** the appropriate SQL DDL statements (in the order you would execute them in real-time on a DBMS) to define the database (with all the constraints).

b) You decide to add a new column called b_date to the table athlete. **Compose** the DDL statement to do this.

c) You decide to get rid of table sport. **Compose** the DDL statement to do this.

d) **Write** the SQL (DML) query to list the names of athletes whose name consist of "khan" alongwith the name of sport they participate in. Your output should be sorted on the basis of sport name.

e) **Write** the SQL (DML) query to list the names of sports alongwith the total number of athletes participating in it.

f) **Write** the SQL (DML) query to list the name(s) of sport(s) in which both athlete with the name "Jehangir" as well as the one with name "Jansher" have participated.
